1) Convert the line into the other two forms of the line.

$y - 7 = -4(x + 6)$

2) Convert the line into the other two forms of the line.

$4x + 4y = 4$

3) Convert the line into the other two forms of the line.

$y + 6 = 4(x - 7)$

4) Convert the line into the other two forms of the line.

$y = -4x + 7$

5) Convert the line into the other two forms of the line.

$y + 4 = 4(x + 7)$

6) Convert the line into the other two forms of the line.

$y - 6 = -5(x + 7)$

7) Convert the line into the other two forms of the line.

$y - 5 = 5(x - 5)$

8) Convert the line into the other two forms of the line.

$6x - 6y = -5$

9) Convert the line into the other two forms of the line.

$y + 4 = 4(x + 7)$

10) Convert the line into the other two forms of the line.

$y - 5 = -4(x - 5)$
